

Mr. Hill's Stay at Home Science Stuff

Name: _____

Hi guys,

I hope you are adapting ok to this new temporary lifestyle. My plan for the next few weeks is to have you guys review the main topics we have covered this year and to get your brains going in a “Scientific Method” way by doing things around the house (inside and out) while hopefully practicing the guidelines set by the President and our Governor. Good luck and use your resources available to find answers. Communicate with family and friends, use the internet if you have it, look for books (encyclopedias) you might have around the house and of course use your brain. Please hang-on to your work so you can bring it back to school at some point. I will be curious to see your “inventions”, what you’ve been doing at home and if you’ve remembered anything. Please e-mail, sean.hill@crooksville.k12.oh.us, if you have any questions or just want to talk. Stay in touch with all your teachers. We’ll be here available and willing to help.

Thanks,
Mr.Hill

1. First - Complete the "FORCES AND MOTION" worksheets (there are four individual pages or two front and back). They are titled "Mr. Hill Science at home March '20" in the upper right hand corner. Please get detailed on the last questions $F=ma$...not just a quick few words...give examples and explain it out like I/we do in class.
2. On your own paper or google docs. - Explain to me what you are doing to stay informed about what is going on in our world today. Are you watching the news more now. Have you scene President Trump and/or Governor DeWine make any speeches or updates. How are you sure you are getting facts and not rumors from the internet? Are you talking with your parent(s), grand-parent(s), guardians and/or friends about things that are going on?
3. What are you doing to help out around your home? Have you started doing anything different than you normally do at home?
4. What's new and different about this lifestyle for you? What's not really changed?
5. What's the best thing about this situation for you?
6. What's the most difficult or hardest thing about this situation for you?

7. FOOD FRIDAY - Have your experiences with Food Fridays helped you during this time? Are you helping with any of the food preparation at home? What are you guys making? Are you getting creative or looking up recipes you haven't made before? Hopefully you are offering to help out with the cleaning up too.
8. I want you to start thinking about an independent research project you can do at home for the fourth nine weeks. My next assignments will be about Earth science review and assigning an at home project that will allow you to practice the Scientific Method and get creative.

Take care, stay healthy and be helpful at home. Take care of your responsibilities and be respectful,
Mr. Hill
